

# UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS & ALCOHOL

Match the

foods to the drinks below that are made from them.

Alcohol is responsible for causing many families to suffer from hunger. As a person drinks alcohol, money is spent which should provide food. The working ability of the drinker is also lessened so that they may not work to their full ability nor earn the wages that they need to live by. A person who drinks alcohol will have feelings of hunger, so that they will often over-eat, using the food that should be for the rest of the family. Grains and other plants which could provide good food are used instead to make alcoholic drinks like:

BEER

VODKA

WHISKY

WINE

RUM

GIN

ALE

CIDER
